

Nicolás Maire Bravo

Computer Science Student | Developer
& AI/Cybersecurity Enthusiast | Entrepreneur

Professional Summary

Computer Science student at UC3M, awarded exchange semesters at the Università di Bologna (Italy) and UADE (Argentina). I have a strong dual focus on Artificial Intelligence and Cybersecurity, but I really enjoy every discipline. Passionate about building my own tools and exploring complex architectures. I believe in turning ideas into reality, and entrepreneurship is what I think about most.

Technical Skills

Languages:

Python, C, C++, JavaScript, TypeScript, SQL, R, HTML/CSS

AI, IoT & Cybersecurity:

PyTorch, Transformers, MQTT, Raspberry Pi, Jupyter, Security Protocols

Tools & Frameworks:

React, Next.js, FastAPI, Supabase, n8n, Hugging Face, Celonis, Flutter

Systems & DevOps:

Git, Linux, Docker, TCP/UDP Sockets, POSIX

Languages

Spanish	Native
English	C1 Advanced (Cambridge)
Chinese	HSK3 (studied up to HSK5)
French	Intermediate
Italian	Advanced

Experience (Entrepreneurial)

CitaSalon.online (SaaS Platform) 2026 – Present
Founder & Full-Stack Developer

- Founded and developed a B2B SaaS platform that digitises local salons and businesses, streamlining workflows and appointment scheduling.

VIA Project (VisiónIAutomatización) 2025 – 2026
Lead Developer & Automation Architect

- Architected the full-stack “VIA” platform (React/FastAPI).
- Engineered backend automation services connecting n8n workflows with custom Python scripts and Hugging Face models.

AI Agent Automation Builder 2025
Python, AI Agents, Visual Interface

- Developed a personal tool that uses interconnected AI agents to analyse business logic and auto-generate complex automation workflows.

Education & Certifications

B.Sc. in Computer Science (Bilingual Programme) 2023 – Present
Universidad Carlos III de Madrid (UC3M)

- Erasmus+ Exchange:** Università di Bologna (UniBO), Italy | Feb 2026 – Jun 2026.
- International Mobility:** UADE (Buenos Aires, Argentina) | Jul 2026 – Dec 2026.
- Santander Grant awarded for academic record.

Academic & Technical Projects

ML: Neural Calculator & Generalisation Engine 2026
Python, PyTorch, Transformers, Deep Learning

- Designed and trained Seq2Seq/Transformer models at UniBO to evaluate structural and out-of-distribution (OOD) generalisation.

Distributed Minesweeper: Fault-Tolerant SMR 2026
Python, Distributed Systems, TCP Sockets, Docker

- Built a fault-tolerant multiplayer game using a Replicated State Machine (SMR) architecture, Leader-Follower topology and two-phase commit.

LLM Security & RAG Encryption Engines 2026
Python, Cybersecurity, Prompt Injection, AES-GCM

- Researched LLM vulnerabilities through PoCs, mitigating prompt injection with ML-based guardrails.
- Built an envelope encryption (KMS/DEK/KEK) architecture for RAG databases.

Atlas IoT IDE & Smart Space Orchestration 2026

Python, JavaScript, WebSockets, UDP/TCP, IoT

- Built a web-based visual IDE to dynamically discover (via UDP multicast) and program distributed IoT devices through a node-based interface.

Performance-Oriented Ray Tracing 2025

C++23, Intel TBB, Performance, AOS/SOA

- Optimised a 3D ray-tracing application by implementing and comparing memory representation strategies (SOA vs. AOS).

Heuristic Search (A*) 2024

Python, A, AI*

- Developed a route-planning system for a spy plane using the A* algorithm and admissible heuristics over a cost map generated by Gaussian radar models.

Mario Bros. Arcade Clone 2023

Python, Pyxel, Object-Oriented Programming

- Recreated the classic arcade game, engineering a complex OOP architecture from scratch to manage physics, collision detection and enemy AI logic.

About Me

Charismatic, punctual and organised. I am a fast learner with a strong dedication to improvement. I adapt easily to new environments, excel at working in a team, and thrive when solving low-level or complex architectural problems.
